ABOUT NOMOGRAPHIC REPRESENTATION OF THE PSEUDO-SUM FUNCTIONS

Maria MIHOC

Abstract. The author provides a study about the nomographic representation of the pseudo-sums with two, three or n terms. It is shown that these pseudo-sums are nomographically represented by plane nomograms with alignment points, by nomograms in space $\mathbb{R}^3$ with coplanar points and by compound nomograms.

MSC: 65S05.

Keywords: nomogram, nomographic representation, pseudo-sums.
